

SuperOffice Intellisync Server

In today's world, staying in sync with the rest of the organization is crucial to staying competitive. And the ability to plan and react on the spot goes hand in hand with that.

Addressing Business Needs

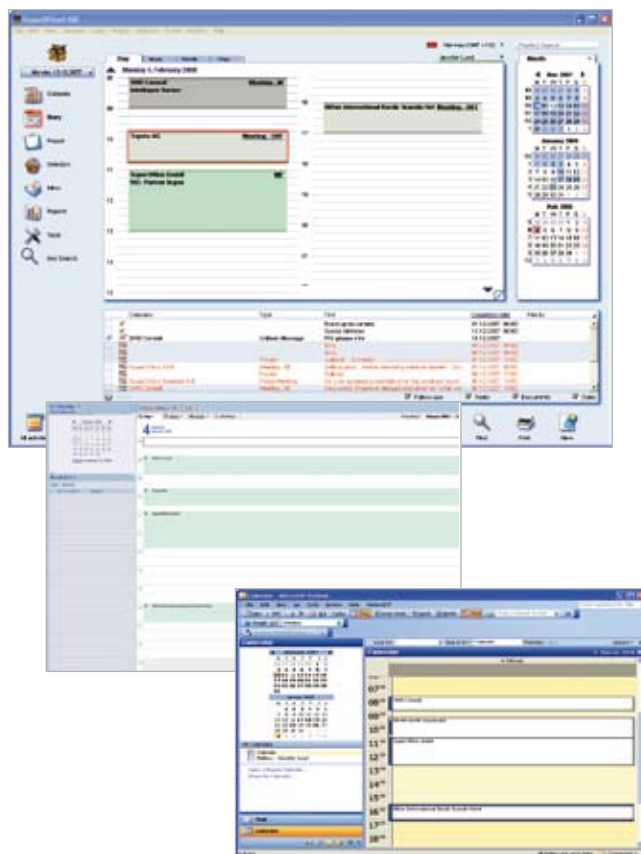

With SuperOffice Intellisync Server, you are able to synchronize your SuperOffice diary with Microsoft Exchange or Lotus Domino and in this way, you are able to share appointments with other employees in your organization not using SuperOffice CRM. Since SuperOffice Intellisync Server runs on the server, the synchronization will work automatically without any user interaction, ensuring that the SuperOffice diary and Exchange / Outlook or Notes / Domino calendar are always in sync.

It also enables effortless synchronization with most mobile device calendars. The only requirement is that your device supports synchronization with Microsoft Exchange or Lotus Domino.

Features

- Synchronize your SuperOffice CRM and Microsoft Exchange / Lotus Domino automatically with the server based synchronization tool
- Exchange appointments between SuperOffice CRM and Microsoft Outlook / Lotus Domino
- You can synchronize both ways or one way (only export data from SuperOffice or only import data to SuperOffice)
- Any setting can be implemented for all users, for a specific user group or for an individual user
- You can synchronize all appointments or only appointments of one or several selected types
- You can specify a time-interval to synchronize within. This will reduce the amount of data synchronized and provide a faster sync roundtrip time

- You can choose not to synchronize appointments that have characteristics like:
 - All-day event
 - An appointment where time is marked as free
 - Birthdays, anniversaries, etc
 - Private appointments
- You can specify that all appointment types created in Exchange / Notes will have a specific appointment type in SuperOffice and visa versa.

SuperOffice®

System Requirements

- A dedicated Windows 2003 Server that only runs this application
- .NET 2.0 Framework installed
- SuperOffice SIX version 6.1 or newer installed (including NetServer 3.0)
- Lotus Domino R5, R6 or R7 installed
- or -
- Microsoft Exchange Server 2000 or newer installed
- Microsoft Exchange 2003 System Management Tools

SuperOffice Intellisync Server is a server-side application which makes the administration of the solution easy and efficient. If your company, for some reason, prefers a client-based solution, SuperOffice Outlook Sync should be considered as an alternative.
